

FIDO TREATS:
First in Dog Oncology Trial utilizing Radioembolization Eye90
Advanced Treatment Study

RECRUITING DOGS WITH
LIVER CANCER.
SPONSORED CLINICAL TRIAL

The University of Missouri Veterinary Medical Center is enrolling patients into a clinical trial investigating the use of a novel radioembolization procedure in dogs. All dogs will receive radioembolization and a subset will be evaluated for subsequent resection.

PARTICIPATION:

- Pet owner must be willing to transport their dog to and from the treatment center in Columbia, MO
- A full screening will be performed prior to enrollment
- Suitable patients will receive one radioembolization treatment
- Participation will require a total of up to 5-visits over 6-months

STUDY BENEFITS FOR PARTICIPANTS

- Radioembolization and surgical resection (if eligible)
- Follow-up physical exams and CT imaging at 3- and 6- months
- Contribute to development of an important cancer therapy

BRIEF INCLUSION CRITERIA – All participants must meet the following criteria:

- Be at least 1 year old and weigh at least 12kg (26.4lb)
- Be diagnosed with pathology confirmed hepatocellular cancer
- Have at least one tumor greater than 3cm diameter but no more than a total of 3 tumors
- Have a life expectancy of at least 3 months without treatment
- Have received no prior anti-cancer therapy for this liver tumor
- Have no other diseases or behavioral conditions that would interfere with study conduct.
